AI and the **UN global goals** - both a risk and accelerator

what are the **sustainable development goals**?

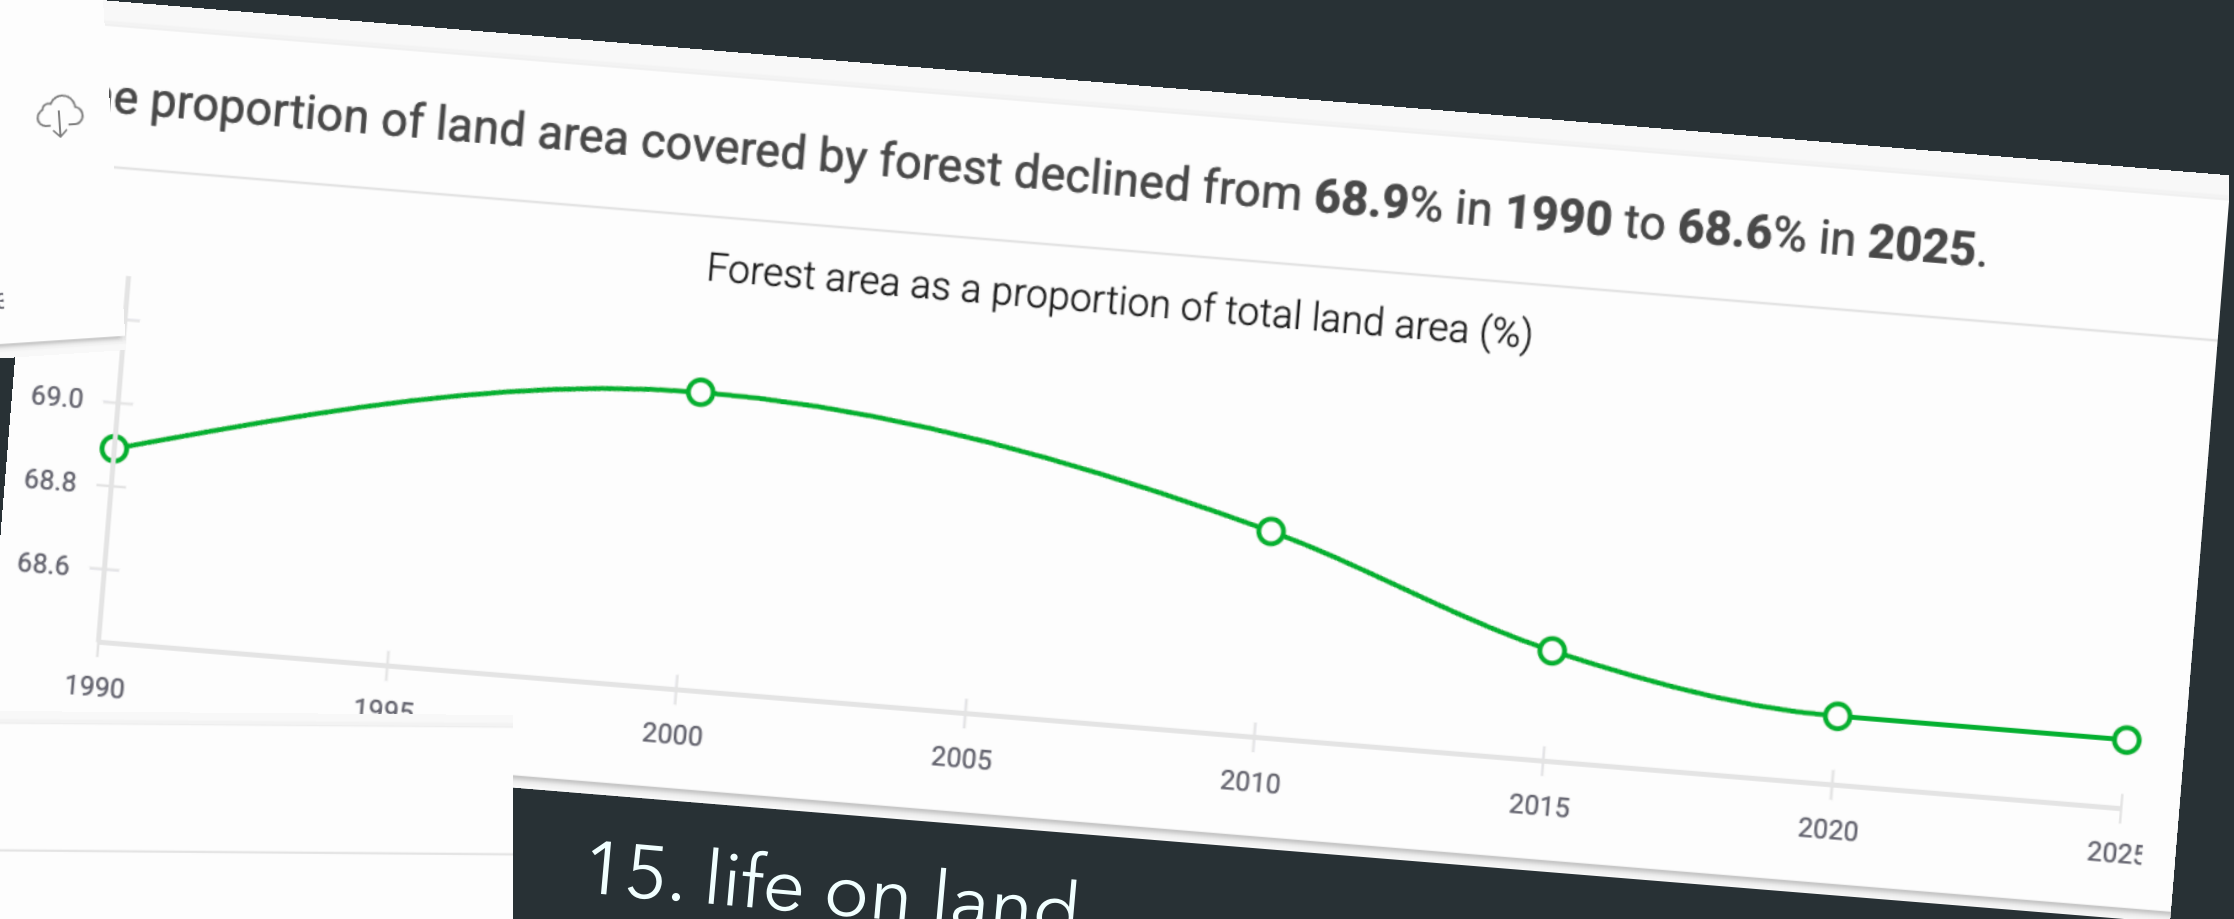

SDGs are measured using **indicators**

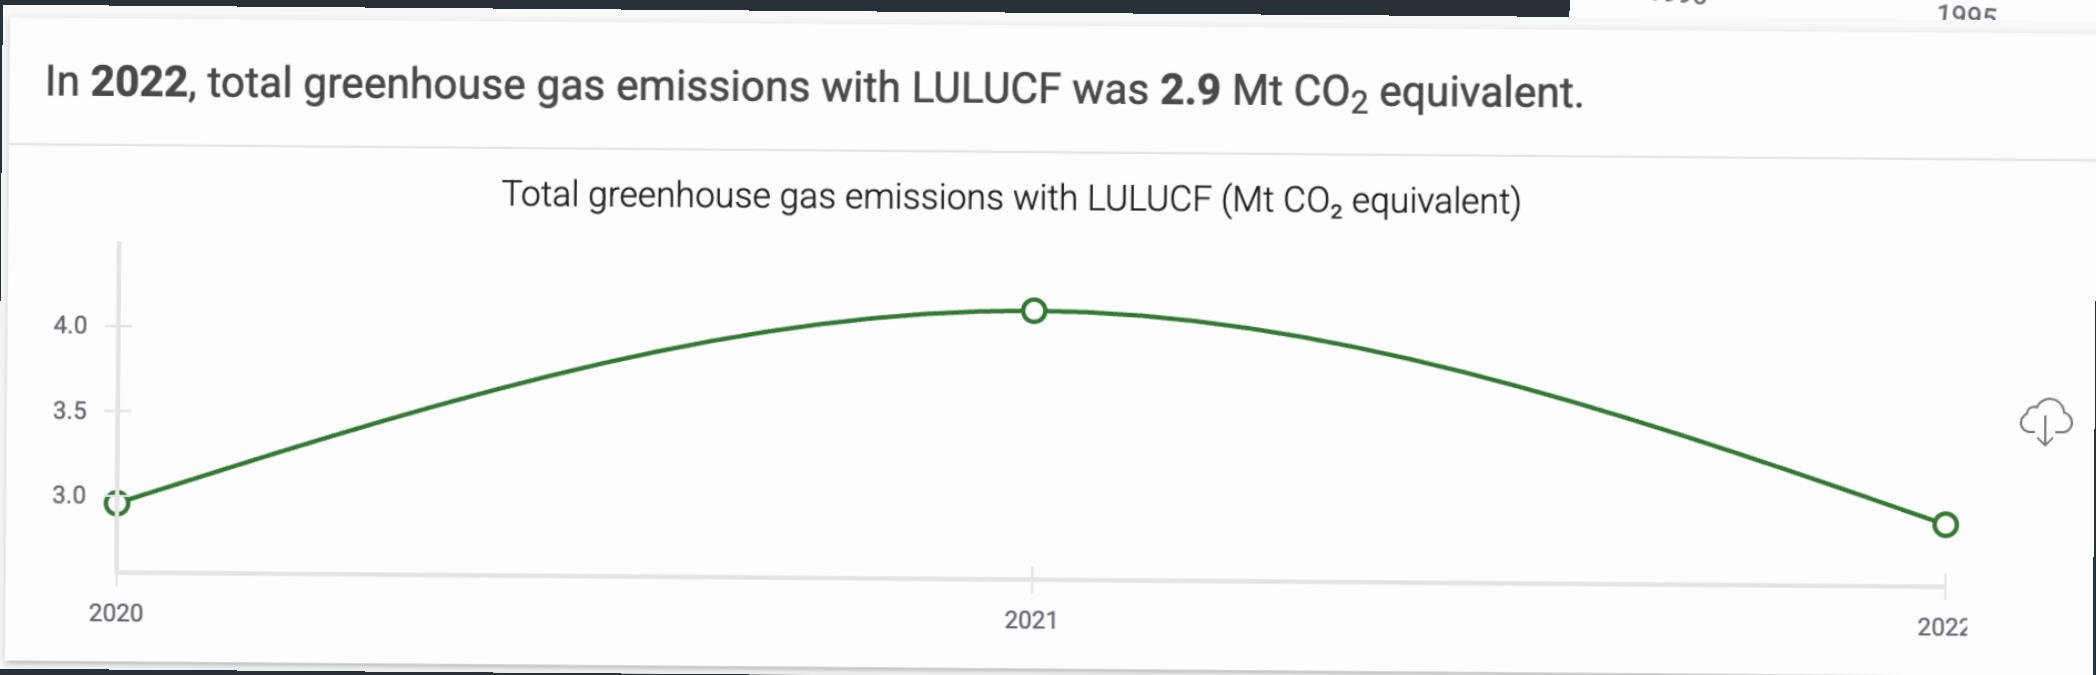

example of some indicators for Sweden for a few goals

10. reduced inequalities

15. life on land

13. climate action

using AI to **accelerate** the SDGs - some high impact projects

Project Giga (UNICEF & ITU)

Convolutional neural networks & satellite images

find 1M unmapped schools

fiber & satellite internet

AlphaFold (DeepMind/EMBL-EBI)

protein folding prediction

200M proteins on open database

medicine, vaccines, enzymes to breakdown PET, climate resistant crops

BioDiversity AI

Deep learning bioacoustics audio analysis

edge devices, e.g. solar powered sensors, recycled smartphones

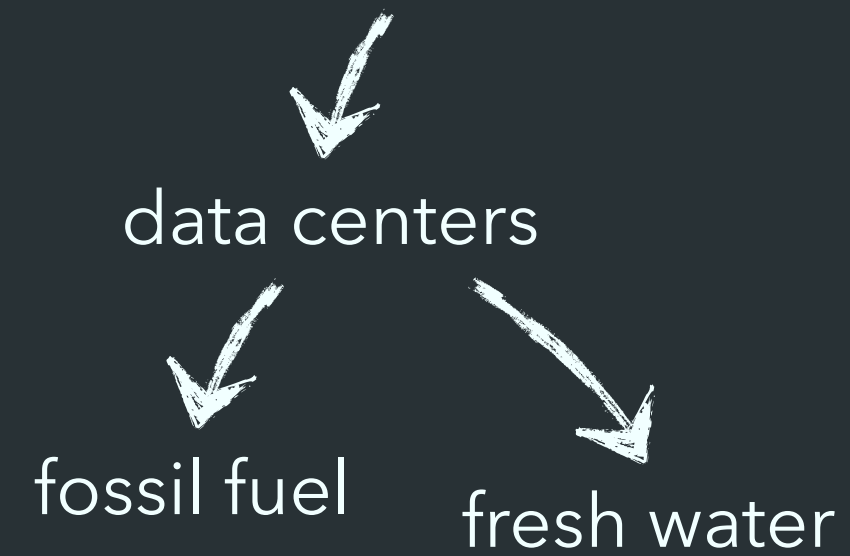

detects chainsaw, gunshots on rainforests

many more ...

some of the risks that **AI** poses to SDGs

training & running large AI models

economic gains in few tech companies

threat to democracy

erode public trust

many more ...

AI for good explicitly connects AI innovation to SDG targets
