Interesting facts about nimble hares and cute rabbits

LLM synthesizing

describe what a rabbit is and the various species and how it relates to hare

Rabbits are small, herbivorous mammals belonging to the family **Leporidae** (which they share with hares) under the order **Lagomorpha**.

Although often confused with rodents, rabbits differ key-wise by having four upper incisor teeth instead of two. They are well known for their long ears, compact bodies, powerful hind legs built for hopping, and high reproductive rates.

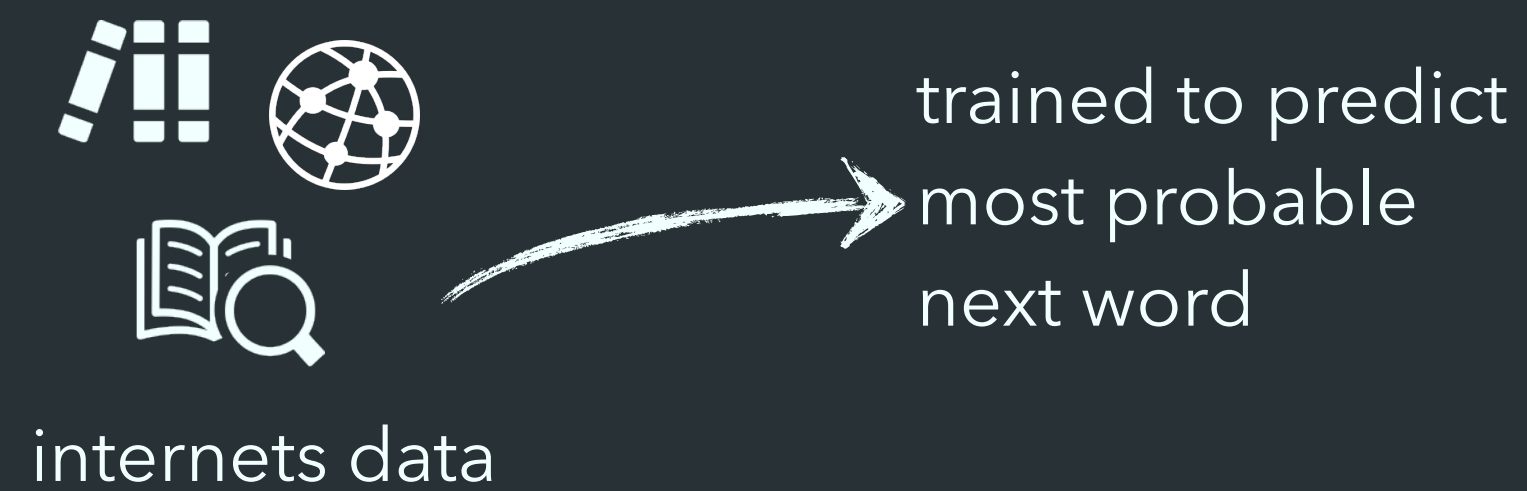

European Rabbit (*Oryctolagus cuniculus*). Källa: Wikipedia
